

CAPITAL FOODS
COST EFFECTIVE QUALITY

3 Phase Broiler Feeding Programme

Capital Foods broiler feeds are nutritionally balanced diets with a superior amino acid and vitamin profile carefully formulated to support optimum performance of broiler flocks. Our feeds should be given to broilers adlib (without restrictions) during the entire rearing period. Farmers using these diets do not necessarily have to switch off lights in order to limit feed intake.

Broiler Starter Meal/Crumbles

<i>22% Crude Protein</i>	<i>12.8MJ/kg Energy</i>
--------------------------	-------------------------

Feed to broilers from day 1 to day 14 of age before switching to Broiler Grower Meal/Pellets. Each bird is expected to consume about 0.455kg of feed during this period.

Broiler Grower Meal/Pellets

<i>20% Crude Protein</i>	<i>13.2MJ/kg Energy</i>
--------------------------	-------------------------

Broilers should be fed on this diet from day 15 to day 25 of age, before switching to Broiler Finisher Meal/Pellets. Each bird is expected to consume about 1.1 kg of feed during this period

Broiler Finisher Meal/Pellets

<i>17.5% Crude Protein</i>	<i>13.3MJ/kg Energy</i>
----------------------------	-------------------------

This feed should be given to broilers from day 26 up to slaughter around day 35, depending on target final weight. Each bird is expected to consume at least 1.7 kg of feed during this period.

NB. All our broiler feeds contain a coccidiostat. Not recommended for turkeys, ducks, geese or any other breeding birds

Please read the Capital Foods BROILER MANAGEMENT GUIDE for comprehensive guidance on rearing broilers. Copies are available at your nearest Capital Foods branch or agent
